1.0 PROJECT BACKGROUND

Resolution Consultants has prepared this Data Summary Report for the Naval Facilities Engineering Command (NAVFAC), Mid-Atlantic under contract task order WE15 Contract N62470-11-D-8013. This report describes the installation of four monitoring wells in 2018 and one initial groundwater monitoring event in 2018 for the Naval Weapons Industrial Reserve Plant (NWIRP) Bethpage Operable Unit (OU) 2 Site 1 off property plume. NWIRP Bethpage is located in east-central Nassau County, Long Island, New York, approximately 30 miles east of New York City (Figure 1). The location of wells RE134D1, RE134D2, RE134D3 and RE134D4 are shown in Figure 2.

1.1 Scope and Objectives

This report provides information on the installation of monitoring wells RE134D1, RE134D2, RE134D3 and RE134D4 associated with Vertical Profile Boring (VPB) 168. The purpose of this investigation was to ascertain subsurface conditions and contaminant levels, and the western extent of the off property plume north of Hempstead Turnpike and west of Wantagh Avenue. The location of wells RE134D1, RE134D2, RE134D3 and RE134D4, all associated with VPB 168 as well as other VPBs and monitoring well locations, is shown in Figure 2.

The field investigation included completing four monitoring wells, well development, soil/groundwater analysis, groundwater samples, and surveying. Field tasks were conducted in 2018 in accordance with the *United Federal Programs Sampling and Analysis Plan (UFP SAP)*, Bethpage, New York (Resolution, 2013a). In addition, the work adhered to the following UFP SAP Addendums: *Groundwater Sampling Using Low Stress (Low Flow) Purgging and Sampling Protocol* (Resolution Consultants, 2013b) and *Installation of Vertical Profile Borings and Monitoring Wells* (Resolution Consultants, 2013c).

Documentation of these activities is included in Appendix A of this report.

1.2 Site History

NWIRP Bethpage is in the Hamlet of Bethpage, Town of Oyster Bay, New York. Since its inception in 1941, the plant's primary mission was the research, prototyping, testing, design, engineering, fabrication, and primary assembly of military aircraft. The facilities at NWIRP included four plants used for assembly and prototype testing, a group of quality control laboratories, two warehouse complexes (north and south), a salvage storage area, water recharge basins, the Industrial Wastewater Treatment Plant, and several smaller support buildings.

The Navy's property originally totaled 109.5 acres and was formerly a Government-Owned Contractor-Operated (GOCO) facility that was operated by Northrop Grumman (NG) until September 1998. Prior to 2002, the NWIRP property was bordered on the north, west, and south by current or former NG facilities, and on the east by a residential neighborhood. By March 2008, approximately 100 acres of NWIRP property were transferred to Nassau County in three separate actions. The remaining 9 acres and access easements were retained by the Navy to continue remedial efforts at Installation Restoration (IR) Site 1 – Former Drum Marshalling Area and Site 4 – Former Underground Storage Tanks (Area of Concern [AOC] 22). A parcel of land connecting the two sites was also retained. Currently, the 9-acre parcel of NWIRP is bordered on the east by the residential neighborhood and on the north, south, and west by Steel Equities; however, a small portion is still owned by Nassau County. Access to the NWIRP is from South Oyster Bay Road.

1.3 Geology and Hydrogeology

1.3.1 Depositional Environment

Previous sequence stratigraphic studies of the New Jersey and New York Coastal Plains have shown that facies successions in the region can largely be explained by global sea level oscillations and sediment supply. The Turonian age sea level changes resulted in several phases of seaward progradation and landward retrogradation that affected the deposition and preservation of lithologic sequences in the Magothy. Periods of elevated or low sea level have a distinct effect on shoreline position and the types of deltaic facies that are deposited on the coastal plain. During high sea level, marine to distal deltaic facies tend to form. In contrast, during periods of low relative sea level, marginal to nonmarine deltaic facies are deposited.

Changes in sediment supply resulting from the tectonic uplift and weathering of the ancestral Appalachians during the Albian stage (approximately 100 million years ago) also influenced depositional environments in the region. The large influx of coarse sediments is reflected in the rapid seaward progradation of the shoreline and extensive delta plain deposits (Magothy Formation) on the New Jersey Coastal Plain.

1.3.2 Stratigraphy

Overburden at the site consists of well over 1,000 feet (ft) of unconsolidated deposits overlying crystalline bedrock of the Hartland Formation. Overburden is divided into four geologic units in descending order: the upper Pleistocene deposits, the Magothy Formation, the clay member of the Raritan Formation ("Raritan Clay") and the Lloyd Sand member of the Raritan Formation ("Lloyd Sand") (Geraghty and Miller, 1994).

The upper Pleistocene consists of till and outwash deposits of medium to coarse sand and gravel with lenses of fine sand, silt and clay (Smolensky and Feldman, 1988); these deposits form the Upper Glacial Aquifer. The continental deposits are considerably thicker than previously thought, ranging from 50 – 300 ft. Directly underlying this unit is the Magothy Formation with a thickness of 650 to 900 ft that extends to a depth of 700 to 1,000 ft below ground surface (bgs), as observed at the former NWIRP and extending southeast to areas south of Southern State Parkway. Locally at VPB168, the bottom of the Magothy (top of the Raritan Clay) is encountered at approximately 878 feet bgs. The Magothy is characterized by fine to medium sands and silts interbedded with zones of clays, silty sands and sandy clays. Sand and gravel lenses are found in some areas between depths of 600 and 880 ft bgs. Based on public water supply screen intervals, these deposits form the main groundwater producing zones of the Magothy Aquifer.

Investigations performed by the Navy since 2012 indicate that the bottom of the Magothy (top of the Raritan Clay) can extend to depths of 700 to greater than 1,000 ft bgs. The top of the Raritan Clay deepens to the south-southeast, as evidenced by clay depths of 1,000 ft bgs (or more) in borings installed off property such as VPB169. The Raritan Clay Unit is of continental origin and consists of clay, silty clay, clayey silt, and fine silty sand. This member acts as a confining layer over the Lloyd Sand Unit. The Lloyd Sand Unit is also of continental origin, having been deposited in a large fresh water lacustrine environment. The material consists of fine to coarse-grained sands, gravel, interbedded clay, and silty sand. These deposits form the Lloyd Aquifer.

1.3.3 Hydrogeology

The Upper Glacial Aquifer and the Magothy Aquifer comprise the aquifers of interest at the NWIRP. Regionally, these formations are generally considered to form a common, interconnected aquifer as the coarse nature of each unit near their contact and the lack of any regionally confining clay unit allows for the unrestricted flow of groundwater between the formations.

The Magothy Aquifer is the major source of public water in Nassau County. The most productive water bearing zones are the discontinuous lenses of sand and gravel that occur within the siltier matrix. The major water-bearing zones are coarse sand and gravel lenses located in the lower portion of the Magothy, below 600 ft bgs. Because of the presence of intermittent clay layers and the depths, the Magothy Aquifer is commonly regarded to function overall as an unconfined aquifer at shallow depths and a confined aquifer at greater depths. The drilling program at the NWIRP has revealed that clay zones beneath the facility are common but laterally discontinuous. No laterally persistent confining clay units have been encountered on property or off property.

Groundwater is encountered at an average depth of approximately 50 ft bgs at the facility. Depth to water in the vicinity of the RE134 series wells is approximately 23 - 26 feet bgs, as measured on December 18, 2018. The groundwater flow in the area is to the south-southeast.

Considerable heterogeneity exists in the subsurface due to alternating depositional environments that resulted from changes in sea level and sediment supply. Laterally continuous fluvial sands and distributary mouth bars are inferred to represent high permeability units and conduits for groundwater flow/contaminant transport, however the continuity of those units is variable. Fine grained muds deposited during maximum flooding appear to correlate to contamination data peaks, potentially acting as storage units by adsorption to fine-grained muds.

2.0 FIELD PROGRAM

Four monitoring wells were installed in the vicinity of VPB168 between April 2, 2018 and June 25, 2018. Field investigation activities consisted of drilling, well installation, well development, sampling, soil/groundwater analysis, and surveying. Drilling during this investigation was performed by Delta Well and Pump Company of Ronkonkoma, New York. A description of these tasks is provided below.

2.1 Drilling and Well Construction

Monitoring wells RE134D1, RE134D2, RE134D3 and RE134D4 were installed using mud rotary drilling techniques (Figure 2). The depth of monitoring wells RE134D1 through RE134D4 ranged from 350 to 690 ft. Well construction details are summarized in Table 1. The boring logs for RE134 series wells with lithologic descriptions of the well screen intervals are included in Appendix A. *2017 OU2 Groundwater Investigation Data Summary Report VPB168* (Resolution Consultants, 2018) documents the installation of VPB168 including detailed lithologic descriptions, continuous gamma plot and multiple volatile organic compounds (VOC) sample results over the entire boring length. The gamma and trichloroethene (TCE)/ tetrachloroethene (PCE) plot for VPB168, which also depicts the well screen interval at RE134 series wells, is included in Appendix A.

Prior to installing the monitoring wells, the screen intervals were determined based on intervals with the highest VOC concentrations as measured in the VPB168 hydropunch samples and coincident intervals with the highest apparent permeability based on the VPB168 gamma logs and geologist logs. During the monitoring well installation, split spoon samples were collected every 5 ft in the screen interval. One soil sample per monitoring well was analyzed for total organic carbon (TOC) via United States (US) Environmental Protection Agency (EPA) series SW-846 method 9060A by Katahdin Analytical Services (Katahdin). Data validation of TOC data was performed by Resolution Consultants. Data validation packages and analytical data tables are included in Appendix A.

Wells were constructed of 4-inch diameter, Schedule 80, National Sanitation Foundation-approved polyvinylchloride (PVC) riser pipe and 0.010-slot well screen. The wells were completed at the surface with a 12-inch diameter steel curb box. The well risers were set below grade and fit with lockable J plugs. Detailed monitoring well construction diagrams are included in Appendix A.

Well RE134D1 was initially installed on June 19, 2018 however it was determined on June 20, 2018 (prior to grouting) that the sand pack had bridged and the well needed to be removed and re-installed. The well was removed on June 20, 2018, the borehole was reamed and successfully installed on June 21, 2018, and grouting was completed on June 22, 2018 and June 25, 2018.

2.2 Well Development

Following installation, wells were developed to evacuate silts and other fine-grained materials and to establish the filter pack to promote a hydraulic connection between the wells and the surrounding aquifer. Well development was not initiated until at least 24 hours after well installation.

The well screens were developed using a combination of air lifting, manual surging, and pumping with a submersible pump. Turbidity was monitored during development to determine stabilization. In compliance with New York State Department of Environmental Conservation (NYSDEC) policy, wells are developed until turbidity was less than 50 nephelometric turbidity units (NTUs), if possible. Table 2 summarizes total pumped volume from air and pump development and final turbidity.

2.3 Sampling

Following development, the wells were allowed to stabilize for at least 2 weeks prior to groundwater sampling in accordance with low flow sampling procedures. The wells were purged using a bladder pump with a drop tube intake placed at the approximate midpoint of the screened interval. The following water quality parameters were continuously measured: water temperature, pH, conductivity, oxidation-reduction potential, dissolved oxygen and turbidity. Groundwater analytical samples were collected when water quality parameters stabilized. Samples were analyzed for VOCs via method 8260C and 1,4-dioxane via Method 8270D SIM by Katahdin. The flow rate for sample collection was 200 mL/minute. All development and purge water was managed as investigation derived waste (IDW). Groundwater sample logs and data validation packages are included in Appendix A.

Monitoring wells were sampled by Resolution Consultants on December 18, 2018. Analytical results and stabilized field parameters are summarized in Table 3 and 4, respectively. Data validation is documented in Appendix A. RE134 series monitoring wells will be included in quarterly sampling as part of the Navy's ongoing Environmental Restoration Program.

2.4 Decontamination and Investigation Derived Waste

Resolution Consultants utilized dedicated and disposable sampling equipment when possible to avoid the potential for cross-contamination of samples. The sampling equipment included dedicated plastic scoops, disposable polyethylene tubing, disposable gloves, and laboratory supplied sample bottles. Hand held equipment and split spoons were decontaminated using Luminox and water wash, a potable water rinse, followed by a distilled water rinse. Water was collected in 5-gallon pails or 55-gallon drums. Non dedicated sampling equipment was decontaminated as outlined in the UFP SAP

Addendum - *Groundwater Sampling Using Low Stress (Low Flow) Purg ing and Sampling Protocol* (Resolution Consultants, 2013b).

As part of the IDW management practices and in accordance with the SAP, the investigation waste (consisting of soil cuttings, drilling muds, IDW fluids, and personal protective equipment [PPE]) generated during the groundwater monitoring well installation and sampling was containerized and staged at NWIRP Bethpage.

IDW solids were containerized in roll offs. Representative samples from each roll off were submitted to Katahdin for analysis of:

- Target Compound List (TCL) VOCs
- TCL Semi-volatile Organic Compounds (SVOCs)
- Toxicity Characteristic Leaching Procedure (TCLP) Metals
- Polychlorinated Biphenyls (PCBs)
- Total petroleum hydrocarbons
- Corrosivity
- Ignitability
- Reactive Cyanide
- Reactive Sulfide
- Paint Filter

IDW fluid generated during well development and purging was containerized in frac tanks and stored at NWIRP Bethpage for characterization and ultimate disposal to the Publicly Owned Treatment Works (POTW), in accordance with the facilities existing discharge permit. A representative water sample was collected from each frac tank and submitted to Katahdin for analysis of VOCs via Method SW 624, pH via Method SW 9040B, PCBs via Method 8082 and Total Metals via Method SW 846. All analytical criteria of the discharge permit were met for disposal of water.

2.5 Surveying

A survey of the monitoring well locations was conducted at the end of fieldwork by C. T. Male, Inc., of Latham, NY, under the direct supervision of Resolution Consultants. The locations were tied into the existing base map developed for this investigation. The survey elevation is referenced to the North American Vertical Datum (NAVD) 1988 and has a vertical accuracy of 0.01 foot. Vertical control

is based on observations of the Continuously Operating Reference (COR) Stations Queens and Central Islip. The horizontal location is referenced to the North American Datum (NAD) 1983 (2011) NY. Long Island Zone 3104 and has an accuracy of 0.1 foot. Local horizontal and vertical control is based on Global Positioning System (GPS) observations using the NYSNet Real Time Network.

A table of survey data (latitude/longitude, northing/easting, elevations of ground, rim and PVC) and a survey map is included in Appendix A.

TABLE 3
ANALYTICAL DATA SUMMARY
(2018) OU2 GROUNDWATER INVESTIGATION

Notes:

1 New York State Department of Environmental Conservation Division of Water Technical and Operation Guidance series (6 NYCRR 700-706, Part 703.5 summarized in TOGS 1.1.1)

Ambient water quality standards and groundwater effluent limitations, class GA; NL = Not Listed

NA = not analyzed

Bold = Detected; ***Bold and Italic*** =Not detected exceeds NYS Groundwater Standards or guidance value

Yellow highlighted values exceed Groundwater Standards or guidance value

Sample type codes: N - normal environmental sample, FD - field duplicate

U = The analyte was not detected and was reported as less than the LOD or as defined by the customer. The LOD has been adjusted for any dilution or concentration of the sample.

UJ = The analyte was not detected and was reported as less than the LOD or as defined by the customer. However, the associated numerical value is approximate.

J = The reported result was an estimated value with an unknown bias.

LOD = limit of detection.

TABLE 4
STABILIZED FIELD PARAMETERS
2018 OU2 GROUNDWATER INVESTIGATION
NWIRP BETHPAGE, NY

Well	Date	Temperature (°C)	pH	Specific Conductance (µS/cm)	DO (mg/L)	ORP (mV)	Turbidity (NTU)	Depth to water (ft bgs)	Purge Flow rate (ml/min)
RE134D1	12/18/2018	13.95	5.12	0.154	4.48	217.2	11.1	33.65	600
RE134D2	12/18/2018	12.73	5.08	0.083	5.23	307.2	13.0	36.81	600
RE134D3	12/18/2018	13.40	5.04	0.077	5.59	239.6	20.7	35.51	600
RE134D4	12/18/2018	12.55	5.17	0.048	2.58	202.0	455	36.21	600

°C - degrees Celsius

µS/cm - Microsiemens per Centimeter

mg/L - milligrams per liter

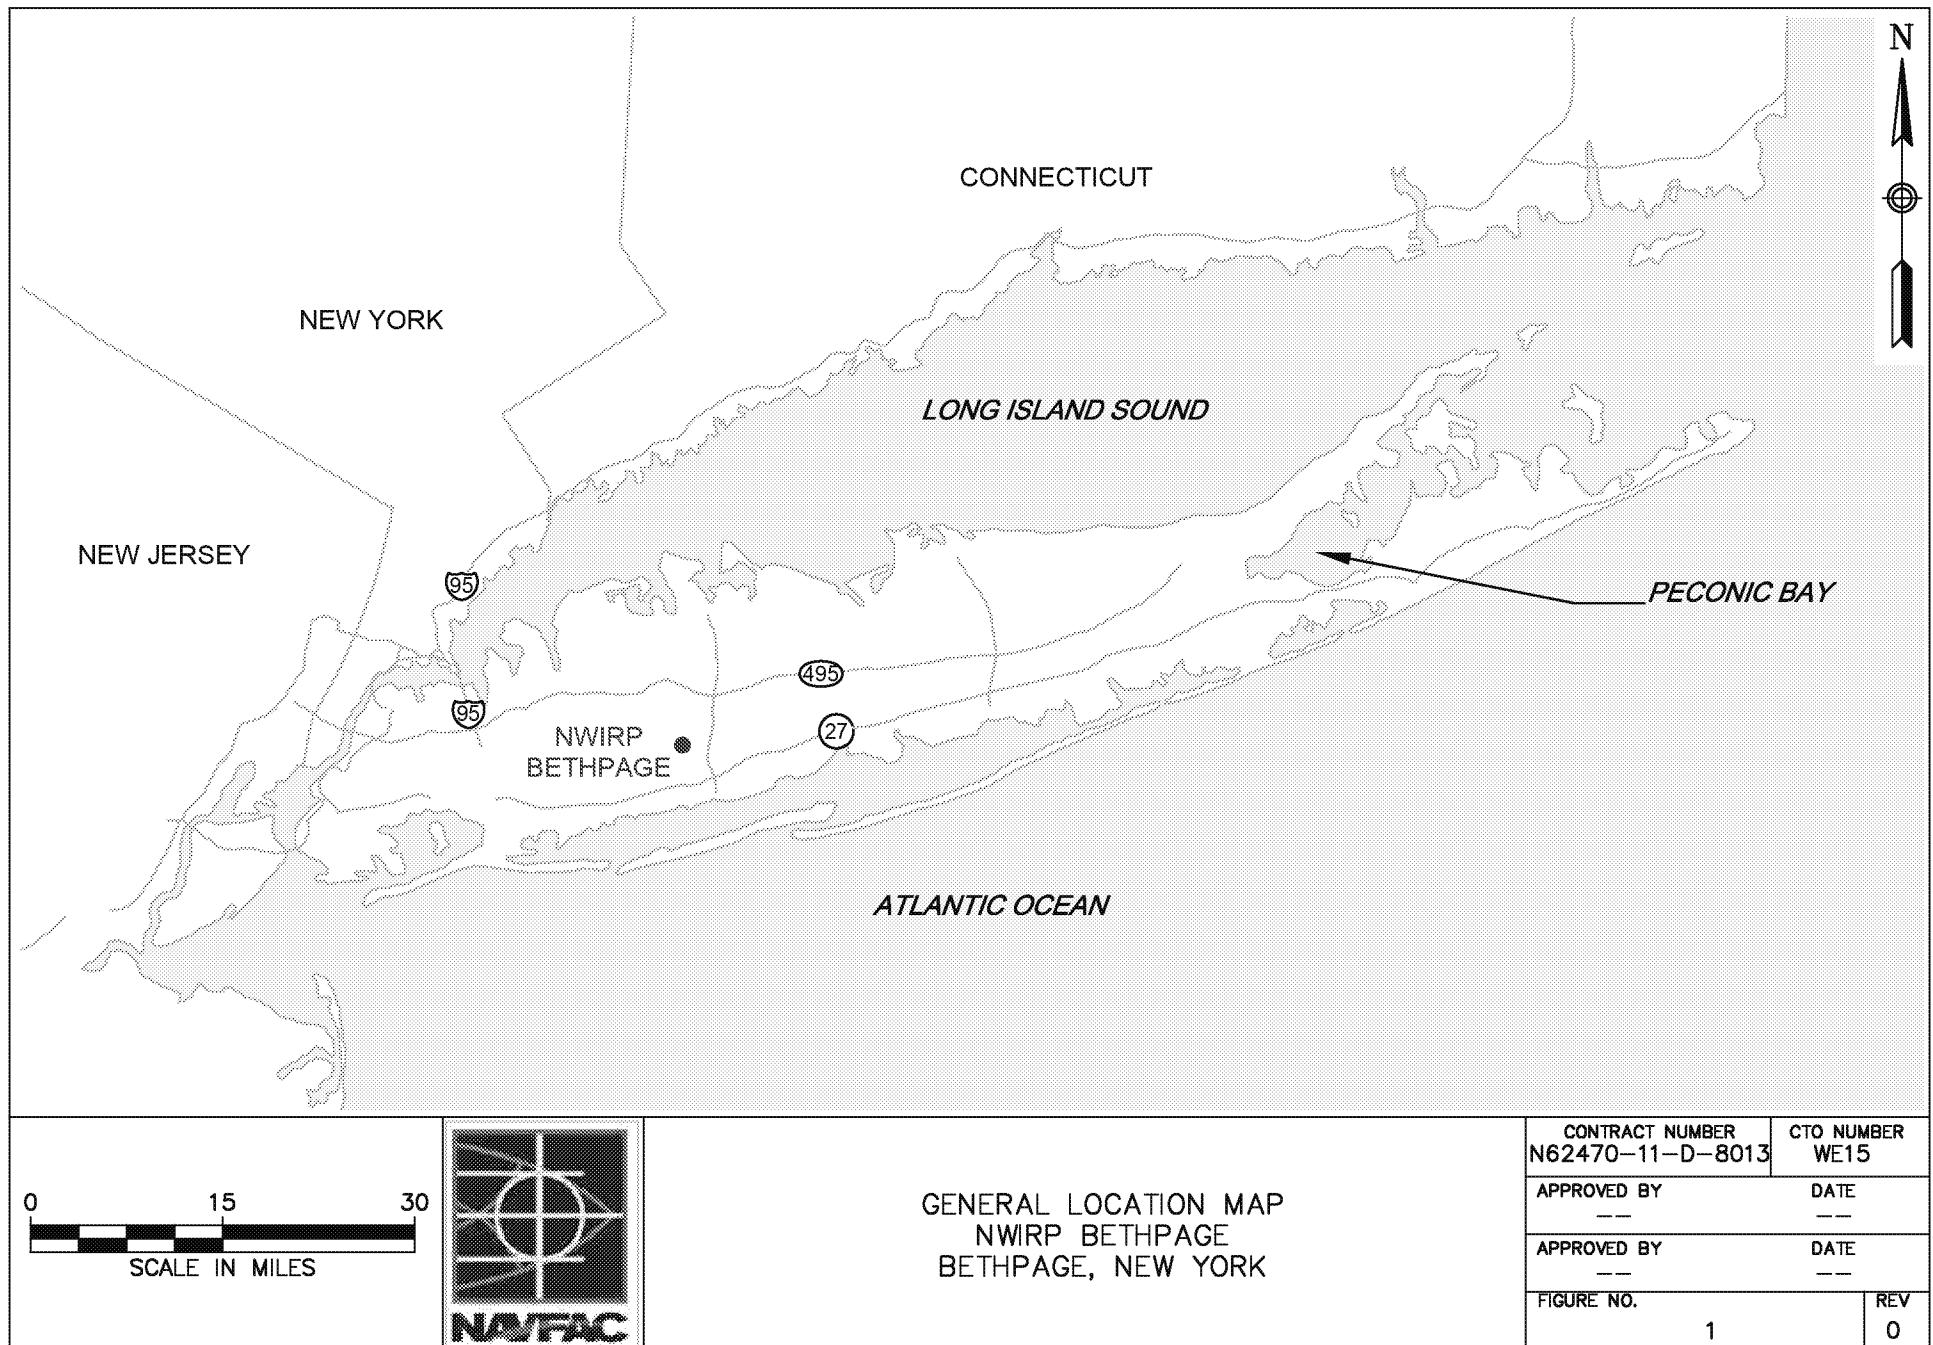

mV - Millivolts

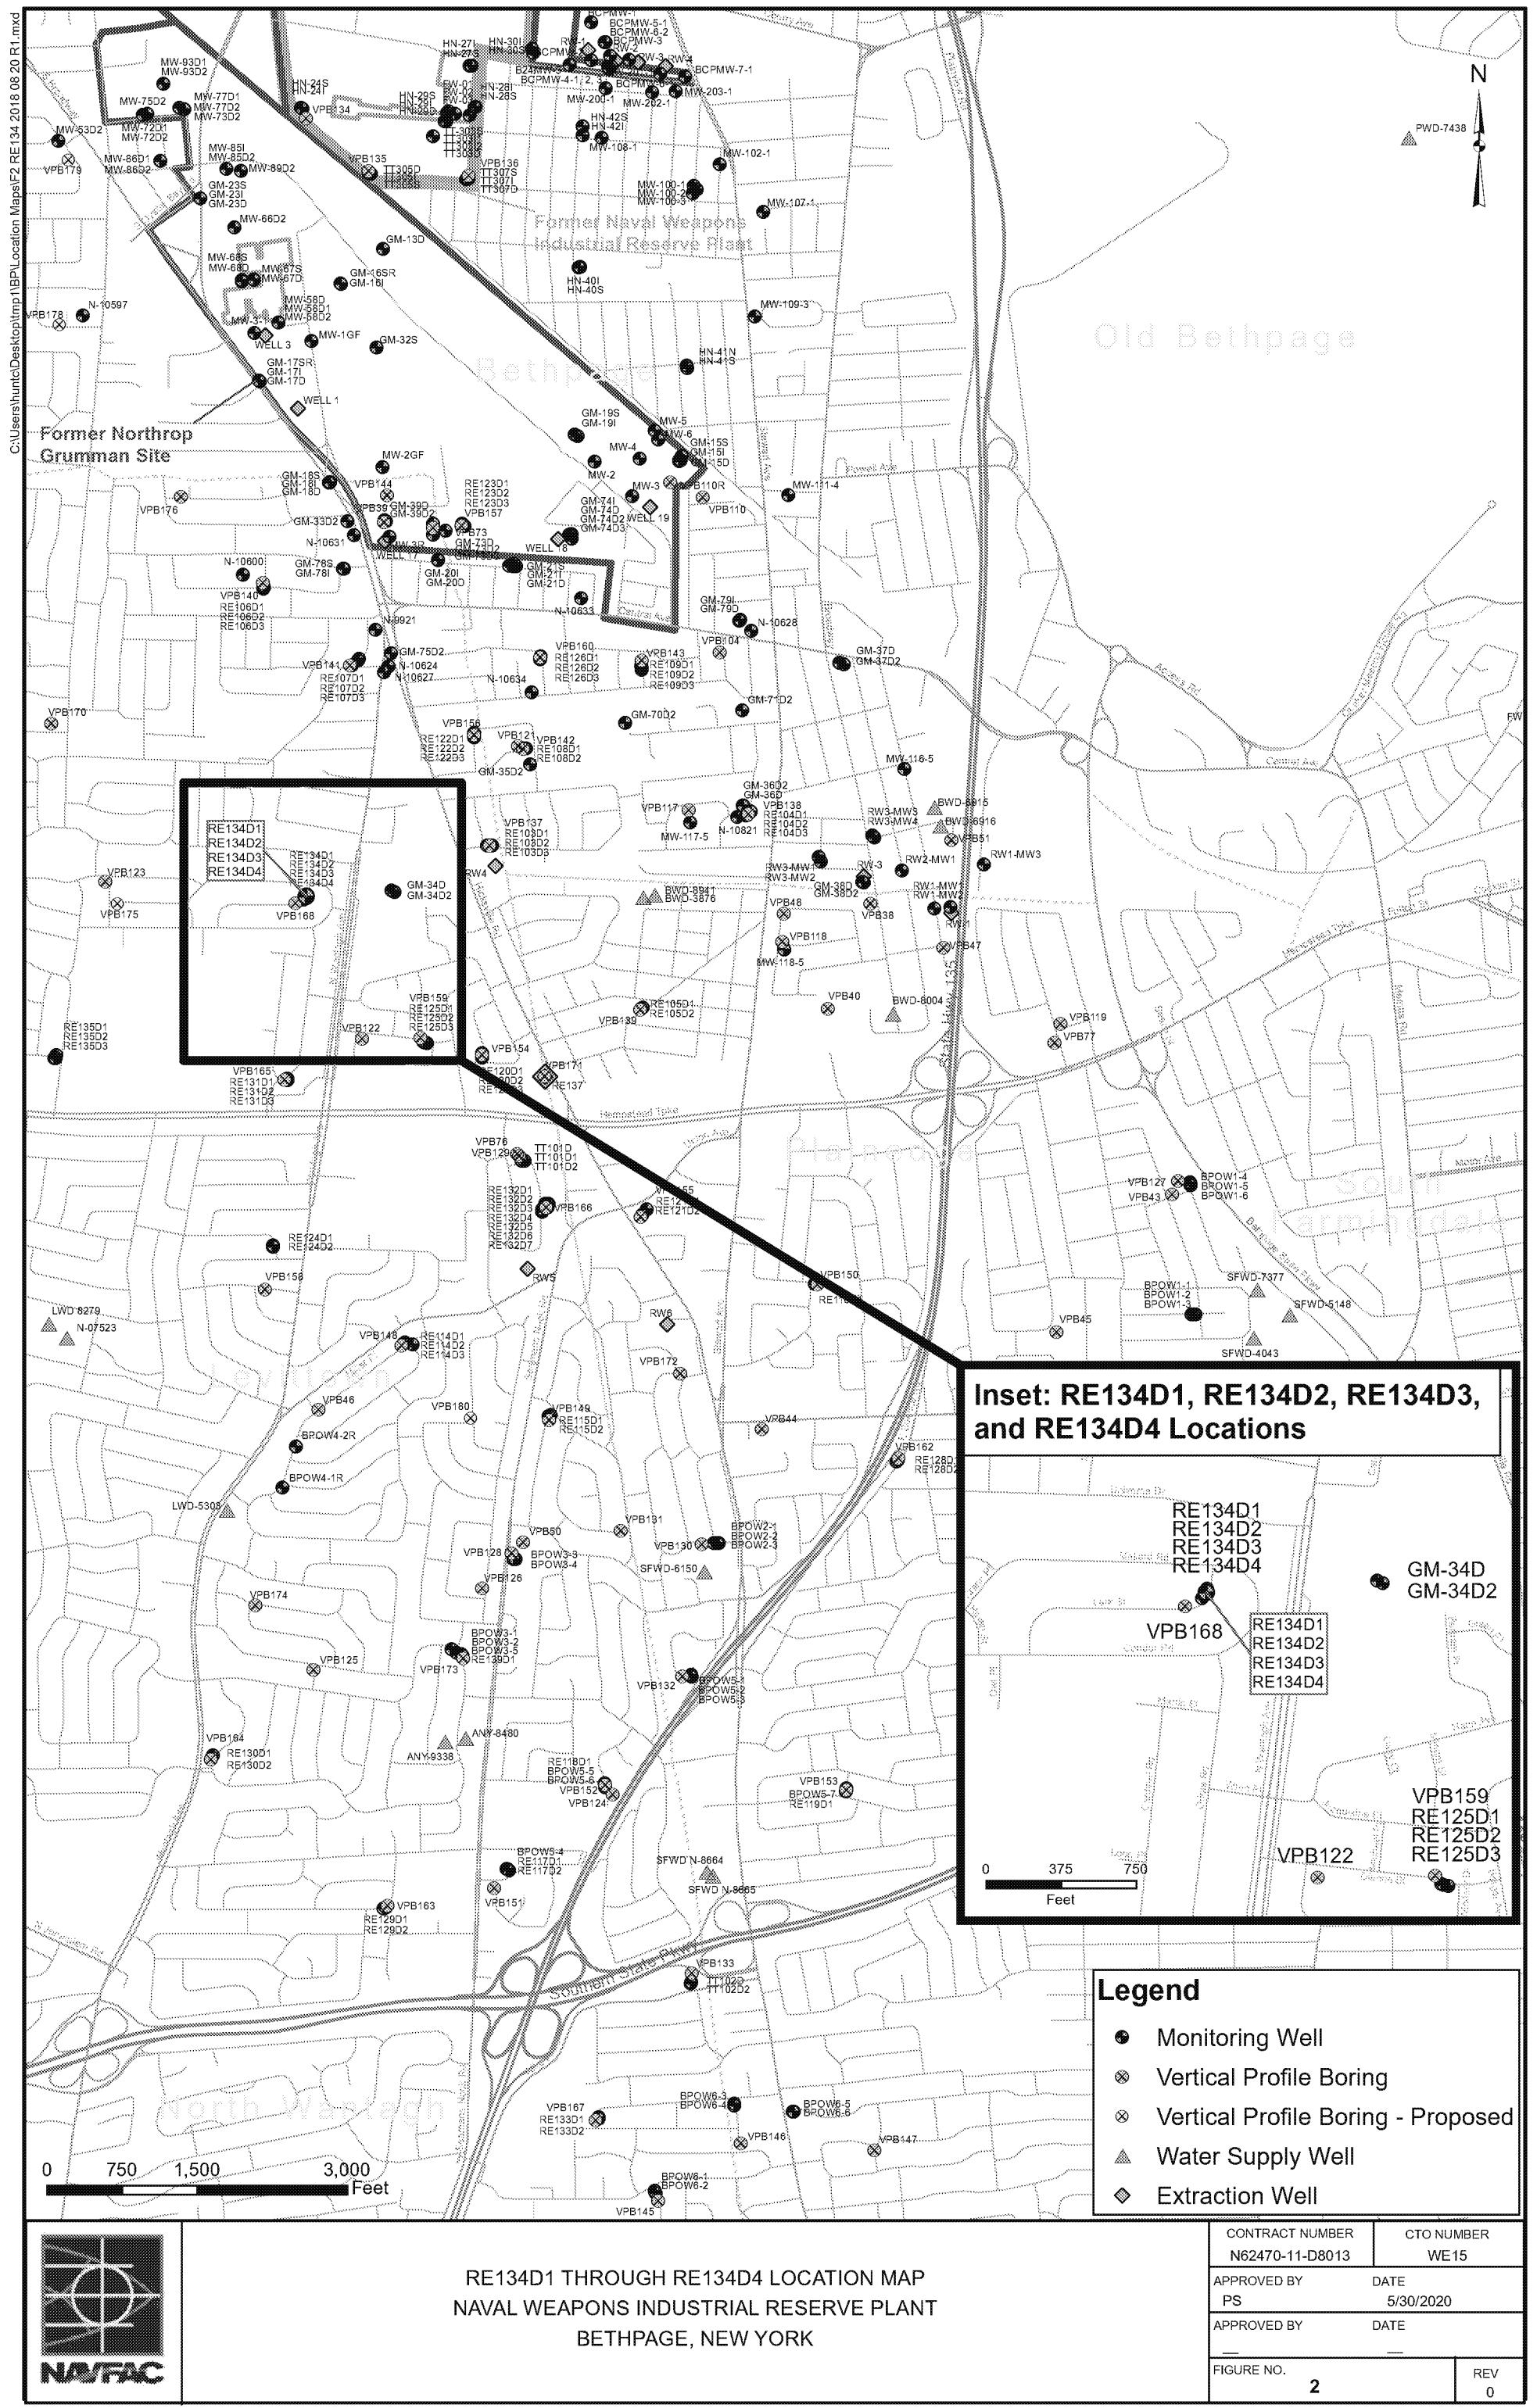

NTU - Nephelometric Turbidity Unit

ft bgs - feet below ground surface

ml/min - milliliters per minute

Low Flow Ground Water Sample Collection Record

Client:	Navy NWIRP Bethpage	Date:	12 / 18 / 18	Time: Start	0845 am/pm
Project No:	60266526			Finish	1015 am/pm
Site Location:	Cash				
Weather Conds:	Sunny cold windy 35°	Collector(s):	S. WEIGHT		

1. WATER LEVEL DATA: (measured from Top of Casing)

- a. Total Well Length 350 ft c. Length of Water Column _____ ft (a-b) Casing Diameter/Material 4-inch PVC
- b. Water Table Depth 33.68 ft d. Calculated System Volume (see back) 13.1 gal. 20 screen length (ft)

2. WELL PURGE DATA

- a. Purge Method: Geotech bladder pump with drop tube assembly

b. Acceptance Criteria defined (see workplan)

- | | | |
|--------------------------|-------------------------|---|
| - Temperature $\pm 3\%$ | - Turbidity $\pm 10\%$ | - D.O. $\pm 10\%$ (values $>0.5 \text{ mg/L}$) |
| - pH ± 0.1 unit | - ORP $\pm 10\text{mV}$ | Remove a minimum 1 screen volume |
| - Conductivity $\pm 3\%$ | - Drawdown $< 0.3'$ | |

c. Field Testing Equipment used:

	Make	Model	Serial Number
	YSI	556	15A102400
	Hach	2100 Q	

Time (24hr)	Volume (gallons)	Temp. (°C)	Conduct. (mS/cm)	DO (mg/L)	pH	ORP (mV)	Turbidity (NTU)	Flow Rate (mL/min)	Depth to water (ft)	Color/Odor
0900	—	12.38	0.124	13.95	7.37	126.7	—	600	33.65	clear/none
0905		13.41	0.131	6.98	5.53	173.9	—	600	33.65	clear/none
0910		13.56	0.136	6.63	5.47	180.1	286	600	33.65	cloudy/none
0915		13.73	0.215	1.65	6.73	121.7	—	600	33.65	cloudy/none
0920		13.87	0.163	2.44	6.40	125.3	—	600	33.65	cloudy/none
0925		13.61	0.140	3.37	5.96	140.7	185	600	33.65	cloudy/none

d. Acceptance criteria pass/fail

Yes No N/A

(continued on back)

Has required volume been removed

Has required turbidity been reached

Have parameters stabilized

If no or N/A - Explain below.

3. SAMPLE COLLECTION:

Method: Geotech bladder pump with drop tube assembly

Sample ID	Container Type	No. of Containers	Preservation	Analysis Req.	Time
RE134D1-600-121818	40-ML vials	3	HCl	VOCs	1015
RE134D1-6W-121818	1-L amber	2	none	1,4-Dioxane

Analytical Data Validation

The following soil samples were collected for total organic carbon analysis:

RE134D1 333-335 ft bgs on 6/18/2018

RE134D2 513-515 ft bgs on 5/29/2018

RE134D3 603-605 ft bgs on 5/10/2018

RE134D4 673-675 ft bgs on 4/24/2018

The following groundwater samples were collected:

RE134D1, RE134D2, RE134D3, and RE134D4 on 12/18/2018

DATA VALIDATION REPORT

Project: Regional Groundwater Investigation — NWIRP Bethpage

Laboratory: Katahdin Analytical

Sample Delivery Groups: SL0822, SL5536, SL4876, SL3600, SL5535, SL4877, SL4289, SL9587, SL8003, and SL8886

Analyses/Method: Total Organic Carbon (TOC) by U.S. EPA SW-846 Method 9060A

Validation Level: 2

Project Number: 0888812477.SA.DV

Prepared by: Dana Miller/Resolution Consultants

SUMMARY

This report summarizes data review findings for samples listed below, collected by Resolution Consultants from the Regional Groundwater Investigation — NWIRP Bethpage site in accordance with the following Sampling and Analysis Plans:

- *Sampling and Analysis Plan, Bethpage, New York.* (Resolution Consultants April 2013).
- *UFP SAP Addendum, Installation of Vertical Profile Borings and Monitoring Wells, Operable Unit 2, NWIRP Bethpage, New York.* (Resolution Consultants November 2013).
- *UFP SAP Addendum, Inclusion of Additional Target Analytes for Volatile Organics Analyses, NWIRP Bethpage OU2, Bethpage, New York.* (Resolution Consultants August 2014).

Data validation activities were conducted using the following guidance documents: *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW-846, specifically Method 9060A, Total Organic Carbon* (U.S. EPA, 1996), *Method SM5310B, Total Organic Carbon by High-Temperature Combustion*, *U.S. Environmental Protection Agency (U.S. EPA) Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review* (NFG, January 2010, and Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 4.2 (October 2010). In the absence of method-specific information, laboratory quality control (QC) limits, project-specific requirements and/or professional judgment were used as appropriate.

REVIEW ELEMENTS

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness (chain-of-custody)/sample integrity
- ✓ Holding times and sample preservation
- NA Gas chromatography/Mass spectrometer performance checks
- NA Initial calibration/continuing calibration verification
- ✓ Laboratory blanks/equipment blanks/field blanks/trip blanks
- NA Surrogate spike recoveries
- ✓ Matrix spike and/or matrix spike duplicate results
- ✓ Laboratory control sample / laboratory control sample duplicate results
- ✓ Field duplicates
- NA Internal standards
- ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. NA indicates that the parameter was not included as part of this data set or was not applicable to this validation and therefore not reviewed. Acceptable data parameters for which all criteria were met and no qualification was performed, and non-conformance or other issues that were noted during validation, but did not result in qualification of data are not discussed further.

Qualifications Actions

The data was reviewed independently from the laboratory to assess data quality. TOC was detected in the equipment blank but professional judgement was used not to qualify the associated sample as undetected. All analytes detected at concentrations less than the limit of quantitation but greater than the method detection limit were qualified by the laboratory as estimated (J). This "J" qualifier was retained during data validation. No results were qualified during this review and are considered usable by the project for their intended purpose, according to U.S. Environmental Protection Agency and Department of Defense guidelines. Attachment A, Table A-1 provides final results after data review.

SIM = Selective Ion Monitoring

Data validation activities were conducted using the following guidance documents: *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods SW-846, specifically Method 8260C, Volatile Organic Compounds by Gas Chromatography/Mass Spectrometry* (U.S. EPA 2006), *SW-846 Method 8270D, Semi volatile Organic Compounds by Gas Chromatograph/Mass Spectrometry* (U.S. EPA 2014), *National Functional Guidelines for Superfund Organic Methods Data Review* (U.S. EPA January 2017), *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (U.S. EPA January 2009), *Department of Defense (DoD) General Data Validation Guidelines* (DoD February 2018), and *DoD Quality Systems Manual for Environmental Laboratories*, Version 4.2 (DoD October 2010). In the absence of method-specific information, laboratory quality control (QC) limits, project-specific requirements, and/or professional judgment were used as appropriate.

REVIEW ELEMENTS

The data were evaluated based on the following parameters (where applicable to the method):

- ✓ Data completeness (chain-of-custody)/sample integrity
- ✓ Holding times and sample preservation

- ✓ Gas chromatography/Mass spectrometer performance checks
 - ✗ Initial calibration /initial calibration verification /continuing calibration verification
 - ✗ Laboratory blanks/field blanks/trip blanks
 - ✓ Surrogate spike recovery
 - ✗ Matrix spike and/or matrix spike duplicate result
 - ✓ Laboratory control sample /laboratory control sample duplicate result
 - ✓ Field duplicate
 - ✓ Internal standard
 - ✓ Sample results/reporting issues

The symbol (✓) indicates that no validation qualifiers were applied based on this parameter. Acceptable data parameters for which all criteria were met, no qualification was performed, and/or non-conformance or other issues that were noted during validation, but did not result in qualification of data are not discussed further. The symbol (X) indicates that a QC non-conformance resulted in the qualification of data. Any QC non-conformance that resulted in the qualification of data is discussed below.

RESULTS

Initial Calibration/Initial Calibration Verification/Continuing Calibration Verification

The ICAL is evaluated to ensure that the instrument was capable of producing acceptable qualitative and quantitative data prior to the analysis of samples. The ICV is evaluated to assess the accuracy of ICAL standards. The CCV is evaluated to determine whether the instrument was within acceptable calibration throughout the period in which the samples were analyzed. Failure of the CCV indicates that the ICAL is no longer valid and should trigger recalibration and reanalysis of the associated samples in the analytical sequence. The ICAL and CCV calibration criteria were met. Data qualification to the analytes associated with the specific ICV was as follows:

Initial Calibration Verification Recovery Non-Conformance:

Criteria	Actions	
	Detected Results	Non-Detected Results
Recovery >120%	J	UJ
Recovery < 80%	J	UJ

Notes:

J = Estimated value

UJ = Undetected and estimated

ICV non-conformances are summarized in Attachment A in Tables A-1.

Laboratory Blanks/Field Blanks/Trip Blanks

Laboratory blanks, field blanks, and trip blanks were analyzed with samples to assess contamination imparted by sample preparation and/or analysis. All results associated with a particular blank were evaluated to determine whether there was an inherent variability in the data, or if a problem was an isolated occurrence that did not affect the data. Samples were flagged in accordance with *DoD General Data Validation Guidelines Module 1* (shown below) where detections were not believed to be site-related.

Blank Non-Conformance Chart:

Blank Result	Sample Result	Validated Modified Result	Validated DL/LOD/LOQ Adjustment	Validation Qualifier(s)
Detect (none)	Non-Detect	No Change to Sample Result	None	None
Detect ≤ LOQ	Detect ≤ LOD	Report at LOD	Adjust DL to LOD	U
Detect ≤ LOQ	Detect ≤ LOQ and > LOD	Report at LOQ	Adjust DL and LOD to LOQ	U
Detect ≤ LOQ	Detect > LOQ but ≤ 5X blank	No Change to Sample Result	Adjust DL/LOD/LOQ to sample concentration	U
Detect ≤ LOQ	Detect > LOQ and > 5X blank	No Change to Sample Result	Adjust DL/LOD/LOQ to sample concentration	None
Detect > LOQ	Detect ≤ the LOD	Report at LOD	Adjust DL to LOD	U
Detect > LOQ	Detect ≤ the LOQ and > LOD	Report at LOQ	Adjust DL and LOD to LOQ	U
Detect > LOQ	Detect > the LOQ and ≤ blank	Report at LOQ	Adjust DL/LOD/LOQ to blank concentration	U

Blank Result	Sample Result	Validated Modified Result	Validated DL/LOD/LOQ Adjustment	Validation Qualifier(s)
Detect > LOQ	Detect > the LOQ and \leq 5X blank	No Change to Sample Result	Adjust DL/LOD/LOQ to sample concentration	U
Detect > LOQ	Detect > 5X blank	No Change to Sample Result	Adjust DL/LOD/LOQ to sample concentration	None

Notes:

LOD = Limit of detection
 LOQ = Limit of quantitation
 DL = Detection limit
 U = Undetected

Blank non-conformance is summarized in Attachment A in Table A-2.

Matrix Spike/Matrix Spike Duplicate Results

MS/MSDs are generated to provide information about the effect of each sample matrix on the sample preparation and the measurement methodology. MS/MSD percent %Rs assess the effect of the sample matrix on the accuracy of the analytical results and %Rs above the laboratory control limit could indicate a potential high result bias while %Rs below QC limits could indicate a potential low result bias. The relative percent differences (RPDs) between the MS and MSD results are evaluated to assess sample precision. The MS/MSD %Rs and RPDs were reviewed for conformance with the QC acceptance criteria. Data qualification to the analytes associated with the specific MS/MSD non-conformances were as follows:

Matrix Spike/Matrix Spike Duplicate Non-Conformances Chart:

Criteria	Action	
	Detected Compounds	Non-Detected Compounds
%R or RPD > Upper Limit	J	No qualification
$20\% \leq %R <$ Lower Limit	J	UJ
%R < 20%	J	Rejected

Notes:

%R = Percent recovery
 RPD = Relative percent difference
 J = Estimated
 UJ = Undetected and estimated

MS/MSD non-conformances are summarized in Attachment A in Table A-3.

Qualification Actions

The data were reviewed independently from the laboratory to assess data quality. All compounds detected at concentrations less than the limit of quantitation but greater than the method detection limit were qualified by the laboratory as estimated (J). This "J" qualifier was retained during data validation. Any sample that was analyzed at a dilution because of high concentrations of target or non-target analytes was checked to confirm that the results and/or sample-specific limit of quantitation and limit of detections were adjusted accordingly by the laboratory.

No results were rejected; therefore, analytical completeness was calculated to be 100 percent. Data not qualified during data review are considered usable by the project. The remaining results qualified as estimated may be high or low, but the data are usable for their intended purpose, according to U.S. EPA and Department of Defense guidelines. Attachment B provides a summary of all qualified results during this data review.

Notes:

SDG = Sample delivery group

ID = Identification

DF = Dilution factor

RC = Reason code

UG_L = Micrograms per liter

U = **Undetected** — The analyte was analyzed but undetected at the listed limit of quantitation or was qualified as undetected during data review due to blank artifacts.

J = **Estimated Value** — One or more quality control parameters were outside control limits or the analyte concentration was less than the limit of quantitation.

UJ = **Undetected and estimated** — The analyte was analyzed but undetected at the listed limit of quantitation; one or more quality control parameters were outside control limits.

Qualification Reason Code:

bl = Lab blank contamination

bt = Trip blank contamination

c = Initial calibration verification outside control limits

m = Matrix spike recovery

Attachment A
Final Qualifier Codes and Explanations

Qualifier	Explanation
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual quantitation limit necessary to accurately and precisely measure the analyte in the sample.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

Attachment B
Reason Codes and Explanations

Reason Code	Explanation
be	Equipment blank contamination
bf	Field blank contamination
bl	Laboratory blank contamination
bm	Missing Blank Information
bt	Trip blank contamination
c	Calibration issue
cr	Chromatographic resolution
d	Reporting limit raised due to chromatographic interference
dt	Dissolved result > total over limit
e	Ether interference
ej	Above calibration range; result estimated.
f	Presumed contamination from FB or ER.
fd	Field duplicate RPDs
h	Holding times
hs	Headspace greater than 6mm in all sample vials
i	Internal standard areas
ii	Injection internal standard area or retention time exceedance
it	Instrument Tune
k	Estimated Maximum Possible Concentrations (EMPC)
l	LCS recoveries
lc	Labeled compound recovery
ld	Laboratory duplicate RPDs (matrix duplicate, MSD, LCSD)
lp	Laboratory control sample/laboratory control sample duplicate RPDs
m	Matrix spike recovery
mc	Deviation from the method
md	MS/MSD precision
nb	Negative laboratory blank contamination
p	Chemical preservation issue
p-h	Uncertainty near detection limit (< Reporting Limit), historical reason code applied.
pe	Post Extraction Spike
q	Quantitation issue
r	Dual column RPD
rt	SIM ions not within + 2 seconds
s	Surrogate recovery
sp	Sample preparation issue
su	Evidence of ion suppression
t	Temperature Preservation Issue
x	Low % solids
y	Serial dilution results
z	ICS results

Map Notes

- Information shown hereon was compiled from an actual field survey conducted on Aug. 8, 2018.
- North orientation is Grid North based on the New York State Plane Coordinate System, Long Island Zone, NAD 83(2011) epoch 2010.00 as obtained from GPS observations.
- Vertical datum shown hereon is NAVD 88(Geoid12A) as obtained from RTK GPS observations using the Queens CORS as a base station.
